

The requirement for this project is :

XAMPP installed version 8 or higher

Composer installed

nodejs installed

Laravel install

Once you have all those install you are really to run the project

Step by step instruction to run the project .

1. First download the zip file the unzip it
2. then open a cmd in the project directory
3. Run this command in the cmd 'composer install'
4. Create a database called 'restaurant' using xampp
5. A sql file is given in the zip file . Import that sql file into the database
6. Last step in the cmd run 'php artisan serve'

Those are all the step to run the project
